Advising Students Committee in EM (ASC-EM)

Emergency Medicine Re-Applicant Applying Guide

Mary Ann Edens, MD; Jeffrey Druck, MD; Adam Kellogg, MD; Alexis Pelletier-Bui, MD; and Emily Hillman, MD on behalf of the CORD Advising Students Committee in EM (ASC-EM)
This applying guide is intended for those unsuccessful in matching in emergency medicine (EM) but not yet willing to give up on training in EM.

General Overview: If you were unsuccessful matching in emergency medicine (EM), you are now faced with a big decision: Do you participate in the Supplemental Offer and Acceptance Program (SOAP) and try to find an unfilled position (not EM)? As we will review, it is nearly impossible to SOAP into an unfilled EM position.

Are you still intent on EM, even if it is not this year? Not matching this year does not mean you cannot become an outstanding EM physician. There are many unmatched candidates who would have a spot if it were not for late applications, poor advising, a bad test score, or bad luck. In this guide we will discuss your options moving forward and provide some advice on how to approach the re-application process.

Part One: What to do now?

The first decision you are faced with is what to do for the next year. Although there is no concrete data regarding the best option, most people come up with one or more of the following plans:

1. **SOAP** into an open EM spot at a program you had not previously applied to.
2. SOAP into another discipline with the intention of reapplying to EM next year.
3. Take a year “off” and do research or pursue a graduate degree like a Master of Public Health (MPH) to improve your CV.
4. Extend medical school training to a fifth year and improve your application for next year.
5. SOAP into another discipline with the intention of reapplying to EM next year.

Breaking Down the Options:

1. SOAP into an open EM spot: Using the SOAP to get into an open categorical PGY-1 EM spot is almost impossible; in 2018, the fill rate for EM was 99.4 percent. Conversely, there are usually many available spots in internal medicine, family medicine, and preliminary surgical programs. There is no reason not to try to SOAP into EM, but a backup plan is required.

2. SOAP into another discipline: This is the most common backup plan – a year of something else. In a recent survey of program directors, this was felt to be the
best option for applicants who failed to match EM primarily (Likert rating of 3.47 on a scale of 1-5).² The clinical experience will better prepare the candidate for his/her EM training and can make them a stronger applicant. Going through the application process again can only enhance the perception of your commitment to EM. Many applicants have been successful using this pathway to eventually match into EM. If this option is chosen, there are two primary considerations: what kind of year to do and where to do it.

3. Take a year “off”: It is very difficult to complete an impressive research project in one year. It is possible to complete a graduate degree, such as an MPH, in a year. There is little data available to determine if either of these options is helpful. Anecdotally, some programs are interested in candidates who pursue these options, and some are not. In the recent PD survey, taking a year off to pursue a graduate degree appeared to be an acceptable option (Likert rating of 3.06), but taking a year to pursue research was actually rated as the least useful alternative (Likert rating of 2.53).²

4. Extend medical school training: This may not be an option for all students. The clear downside is financial cost, which is likely to be huge. If this is a viable option, the experiences that can be built into that extra year should produce a better qualified candidate for next year’s match. This is a particularly good option for solid candidates whose applications suffered from being late to EM; if insufficient opportunities to interview was the likely cause if your inability to match, then extending medical school is a possible solution. This option also leaves you available to fill a last-minute opening that might come up after the match. Program directors rated this option just below pursuing a graduate degree with a Likert rating of 2.94.²

WHAT kind of year to do?

There is no consensus among the EM program directors on what kind of preliminary (prelim) PGY-1 year is best, or if a categorical program (contract for full course of training) is the superior option; however, we now have a general feeling regarding this based on the recent program director survey.² These are the most common options and some rationale:

- Surgery prelim year: Many students choose this route, and program directors actually rated this as the preferred type of preliminary year (Likert rating of 3.74), just above the transitional year and medicine prelim year. There are those who
feel the more rigorous surgery year is more impressive; however, there is often little flexibility in the schedule to allow for EM elective time and interviewing, and the re-applicant is left without a job after one year.

- **Transitional prelim year:** Some program directors feel this is the best preparation for a re-applicant (Likert rating of 3.60). Training is typically split between surgery and medicine, and many of the rotations match what is done in an EM1 year. This is generally a more rigorous experience than a year of IM, and the future EM program may be able to give some credit. The downside is finding a suitable program at a hospital with an EM residency. The schedule may also lack flexibility for doing an EM rotation (when a new letter could be obtained) and interviewing. In addition, at the end of the year there is no contract for further training if they do not match into something else. In recent years these spots have become increasingly difficult to find in the SOAP because less are available overall.

- **Medicine prelim year:** This option often provides greater flexibility for getting EM elective time early and for interviewing. Some program directors may consider this less rigorous (Likert rating of 3.49). At the end, the re-applicant is without a job; however, finding a categorical IM program that will allow them to start as a PGY-2 should be an option if matching into EM fails.

- **Medicine or Family categorical spot:** While these options have the same benefits and downsides as a one-year Medicine spot but with the added advantage of still having a training position should a re-application to EM be unsuccessful, program directors did not look as favorably at these two options (Likert rating of 2.55 and 2.30, respectively). Thematically, program directors showed a hesitancy to recommend SOAPing into a program with the intent of leaving after one year, thus compromising the program and taking away an opportunity for training from another applicant. However, if the applicant is up front about their intentions, this may be a viable option. Re-application to EM is hard and the program director knows they have a high likelihood of keeping the resident; being supportive maintains a good relationship and is in his/her best interest.

WHERE to do it? (This is more important than WHAT.)

The ideal position is one where there will be the opportunity to do an EM elective early (August, September) in an ED that has a residency program. This gives the re-applicant access to new letters from leadership in an EM residency program. The EM program
director at this hospital is likely to be the best advisor and advocate for a re-applicant. Most EM program directors agree that these letters are the most important part of the re-application process.

Key Points

1. If you do not initially match into EM but plan to re-apply next year, your options in order of preference from a recent EM residency program leadership include: participating in the SOAP to secure a non-EM preliminary or categorical position, taking a year off to pursue a graduate degree, extending medical school training to a fifth year and taking a year off for research.²
2. Whenever possible, strongly consider an EM rotation in the summer or early fall so you can have an updated SLOE.

Part Two: Improving the Re-Application

Before re-applying, it is important to critically review your application to determine why you did not match. Some issues may be obvious, but others may not be. Some issues may be surmountable, while others may be more difficult to overcome. The information below can serve as a guide to reviewing your application and approaching the re-application process. You must aim to identify issues and formulate a plan for what you can do to counter these and strengthen your application.

Reviewing Your Application

It is often helpful to identify a trusted advisor to talk with about your application. Come prepared to discuss the number of programs you applied to, the number of interviews you attended and also take some time to reflect on your EM application, EM rotation performance and interviews. Even if you think you know why you didn’t match, an advisor may be able to offer additional insights to red flags in your application. Red flags are things that are seen as warning signs to program leadership and may be the cause for your failure to match.

Why Applicants Don’t Match and How to Deal with Them

1. USMLE or COMLEX Scores: This issue is not correctable. Once you have taken the tests and passed, you do not have the opportunity to retake them to improve your score. That “low, but passing” score will follow you on all your
applications. While this is a red flag, most EM residency leadership will still interview individuals with a below average USMLE score. However, a failure on your USMLE/COMLEX will make matching in EM very difficult as approximately half of EM residency leadership will not interview you. The most important thing you can do is address your scores in your personal statement. Discuss why you feel you did poorly. More importantly, you need to talk about how this score does not define your clinical skills or desire to work hard. One other thing that may be helpful is taking and passing USMLE Step 3 prior to your re-application. While this is not mandatory, it is another way to show your dedication and that you are able to pass a standardized test.

2. Number of Applications: Perhaps after you and your advisor review your application, you feel this is the most likely cause for your failure to match. If so, great! This is easy to fix. You just need to apply to more programs. In the 2017 NRMP applicant survey, the mean number of applications submitted for matched applicants to EM was 41. As a re-applicant, even if you applied to an appropriate number of programs initially, you will likely need apply to more programs the second time around. In the 2018 NRMP program director survey, 24 percent of program directors indicated they often interview prior graduates, however 71 percent responded they seldom do. As a rule, you will need to broaden the area where you are looking. You will likely need to look at programs that were not on your original list.

3. Wrong Type of Program: Some programs tend to be more competitive than others. Please note that this does not mean that “more competitive” programs are “better” programs. A combination of things such as geography, reputation, and program characteristics help determine the competitiveness of a program. You should focus your efforts on programs that are a good match for you. This is where an advisor will be particularly useful as they may be able to guide you to these types of programs. Additionally, if a program has an area of focus that you have no interest in, applying to that program may not be helpful. For example, if a program has a strong research focus and you have not done any research and have no interest in doing research, an application to that program is not likely to be helpful. This is one area that the EMRA Match website (www.emra.org/match) may be useful. It gives guidance regarding minimum program requirements and denotes if programs have specific focus areas.

4. MSPE (Medical Student Performance Evaluation; Dean’s Letter): If you had a particular rotation that sabotaged your application, it is crucial that you speak with your dean’s office to see if you can get particularly egregious comments.
removed. If this is not an option, you must address this in your personal statement or you will be in the same position you were in with your first application. You need to have a reason and a response that should address what you learned from the experience. If you have multiple rotations with similar comments, you absolutely must address this. Your explanation should include how you function better in the ED setting. You should explain mitigating circumstances, but be careful not to just make excuses. In other words, take responsibility for what happened. Describe the steps you have taken to remedy the issue and how you emerged from these challenges better prepared for a career in EM.

5. Professionalism Issues: These are tough issues to deal with and are most likely evident in your MSPE. You must address these head-on in the personal statement with a focus on what you learned and how you have changed. Having a misdemeanor or felony history must be reported in ERAS and explained in your application (ERAS has a text box where applicants can include narrative comments regarding a misdemeanor or felony). For professionalism issues, you must accept responsibility, take ownership of your mistakes, and demonstrate making conscious changes for the better. Take some time to truly reflect on your experience, identify how you could have handled the situation differently, and be able to articulate what you learned. The personal statement is a great place to address these issues.

6. Letters of Recommendation: This is a hard category to address if the concern is that you had an unfavorable letter. If you were able to obtain multiple SLOEs, it is possible that one of the letters was unfavorable. If there was one letter writer and/or rotation you were unsure about, that is possibly the letter that caused you a problem. You should consider replacing that letter with a new letter. If you are in a training position, ask if you can rotate through the ED to obtain a new letter of recommendation.

Perhaps you were only able to obtain one SLOE. Although it is possible to match with only one SLOE from an EM training program, one must have a very strong application. If you were only able to obtain one SLOE and are currently a resident within a non-EM program, consider talking to your program director to arrange an EM rotation as an elective where you can secure an EM letter. Alternatively, you might be able to see if the department will let you do longitudinal shifts (shifts on your time off that are not part of your residency curriculum/assignments). Assuming you are a resident in a training program, a
letter from your current program director detailing your strengths would also be ideal.

7. Interview Issues: If you and/or your advisor are concerned you did not interview well, consider taking an interview course where they film you, provide feedback and make recommendations. Most are set up for business applicants, but the basic principles cross over.

Key Points

1. Make sure to perform an honest review and assessment of your application with a trusted advisor.
2. Address red flags in your application/personal statement.
3. Whenever possible, strongly consider an EM rotation in the summer or early fall so you can have an updated SLOE or letter of recommendation.
4. If you did a preliminary or categorical year, have your current program director write you a letter of recommendation.

Final Thoughts

If you have red flags on your application, re-applying and matching into an EM residency will be harder for you. In 2018, there were only 10 EM spots in the SOAP.¹ Each year applicants with no red flags still do not match into EM, so someone with one or multiple red flags has an uphill climb. Your best bet may be to rotate/spend time at a program so they can get see how amazing you are and then hope that program takes you. However, even if they love you at that program, that doesn’t guarantee a match. While we are not advising anyone to not re-apply to EM, it is time to be realistic and make sure you have an alternative career path in mind. If you are in a prelim position or held off on accepting a PGY-1 training position, you can apply to more than one specialty at a time, making EM your primary choice and another specialty your backup.
